LITTLE CHIEF'S

Secures Adjoining Ground and Will Commence Vigorous Development Work.

ODIN'S TRIAL SHIPMENT

NEW CONSOLIDATION MOVE ON FOOT FOR BINGHAM.

The Little Chief Mining company has just closed a deal with Mrs. T. T. Sullivan of Eureka that is of more than passing importance to the company. It is for the purchase of two adjoining claims the purchase of two adjoining claims that close up a gap on the Gemini side of the company's holdings and by the terms of which the Little Chief has three years in which to demonstrate the value of the ground and make a final payment. Just as soon as the moneys from the pending assessment on Little Chief are collected, it is the purpose of the management to begin cross-cutting for the new ground with three shifts. The work will be done from the 900-foot level and within six months it is expected that important disclosures will have been made. From the manner in which the Gemini has been made to disgorge its riches and from the way the Ridge & Valley has taken up the work on its side it is figured by those conversant with conditions that the Little Chief has a practical cinch on finding a continuation of the large and rich ore bodies in the territory it has just secured. It is a matter of general knowledge that the Little Chief has been on the feather-edges of fine ore bodies in its own limited territory for a long time and, with the splendid depth it has attained and with the new ground in the right direction now free to invasion, substantial results should be forthcoming during the coming summer, if not before. An an officer of the company put it yesterday:

"We have been diligently searching for that close up a gap on the Gemini side

put it yesterday;
"We have been diligently searching for pay bodies of ore in our own territory for a long time and, while we have not made the mine we expected to find, the development that has been done has given us a good understanding of conditions and we feel that we have made a good bargain with Mrs. Sullivan."

NEW MOVE AT BINGHAM.

Several Properties May Be Gathered in by One Company.

Butler-Liberal. It has been reported that comprol was being bought by Walter C. Orem at 25 cents a share, for the New Red Wing company, but this Mr. Orem denies. He stated yesterday that the price named was not correct and that the option which has been secured is not for the Red Wing company, though the interests to whom the option will be turned over are mostly identified with that company.

"What may eventually come of it all,"

"What may eventually come of it all," said Mr. Orem during the day, "I am urable to say. There is a good deal of territory in that portion of Bingham that might be handled and made to pay handsomely if it was properly controlled, but whether it can be rounded up I do not know."

territory in that portion of Bingham that might be handled and made to pay handsomely if it was properly controlled, but whether it can be rounded up I do not know."

The New Red Wing is a proposition that has been under a steady development for a long time and it is now understood that sufficient ore has been blocked out to justify the erection of a milling plant this coming spring. That this will be done is quite certain and it would seem that through the long tunnels and deep workings of the Red Wing would be the way to develop and make productive the Butter-Liberal and other ground in that vicinity. It is admitted by Mr. Orem that there is a friendly feeling between the interests that have got the call on Butler-Liberal control and that it would not be impossible to bring the that to carry out the scheme which.

that it would not be impossible to bring these interests together. It is figured, too, that to carry out the scheme which has suggested itself to these interests will take something like \$250,000, so there must be several things to consider before it can even be said that the purchase of the control of Butler-Liberal will be consummated. In the meantime minority interests in the Butler-Lizeral are kicking. Some of them think that the majority ought to to have so arranged matters that they might all have had a chance to get on the band wagon and ride.

ORE FROM THE ODIN.

Initial Shipment From Property-Headed for Market.

The initial shipment of ore from the Odin company's Park City property at Park City is now at the Mackintosh sampling works and the expectation is that it will be on the market by the end of the present week. The property has been under development during the greater portion of the year, or since the incorporation of the company by Henry Welsh, W. J. Buck. Peter Cass and E. P. Evans of Park City, and W. I. Snyder of Salt Lake. Several hundred feet of tunneling has been done and, while the main ledge, exposed in old upper workings, has not yet been encountered, considerable fine ore has been taken out of the bedding planes through which the of the bedding planes through which the tunnel was and is being run, What the present shipment will show is not known, but the management is corrident that it will at least demonstrate the values that may be expected when the main ore-bearing channel is when the main ore-bearing channel is reached. The property, nearly all of which is patented, bumps right into the Keystone and Kearns-Keith ground and is believed to carry the cream of the high-grade ore bodies that used to make so extensively in the old Apex ground to the northeast. Returns from the initial lot of ore from the property are being awaited with keen interest by those who are behind the enterprise.

MANHATTAN ATTRACTIVE.

Forty Miles Northeast of Tonopah, the Camp Is Making History.

(Special to The Herald.) (Special to The Heraid.)
Goldfield. Nev., Jan. 1.—The new camp of Manhattan. forty miles northeast of Tonopah, continues to attract unusual attention, and indications are not wanting that the rush there will equal that to Bullfrog a year ago. The Tonopah board of trade is alive to the importance of the camp from a commercial standpoint and has appointed a committee to see what can be done toward improving the roads leading in that direction. Efforts are also being made to induce the Southern Pacific railroad to sell tickets to passengers bound for Manhattan to Tonopah instead of to Austin as has been done heretofore.

done heretofore.

It is reported that a newspaper outfit is already on the ground and that the camp is rapidly taking on the airs of modernism. A city is being founded; salcons are going up by the score. In a case of this kind there is every adventage in arriving on the ground early. a case of this kind there is every advantage in arriving on the ground early; of squatting on some land or of purchasing town lots. If the camp is to be a permanent success, and everything points that way just now, all those who acquire property, and most of those who engage in business, will make little or

in the race for success are the same qualities that count everywhere else in the world, and the fittest survive. The wonderful thing about it is "opportunity of the survive of the objective point is reached.

An Ordinance.

An Ordinance.

An Ordinance.

An Ordinance.

An Ordinance.

nity.

Ore is being shipped out of Manhattan by wagons. This is the chief cause of the excitement. Camps may come and camsp may go but the camp that ships cre may go on forever. Rich gold ore was discovered at the "grass roots" at Manhattan. A dozen other new camps have been made in southern Nevada during the last two years, and all of them have good mines or prospects, but only those that have been able to send out a few shipments of valuable ore have commanded unusual public attention.

There has been a camp at Gold Crater, twenty-eight miles south of Goldrield, for some time, and reports from there have always been of the most favorable kind, but nothing like a wash beat of the most favorable kind. always been of the most favorable kind, but nothing like a rush has taken place. From fifty to one hundred men have been working there, however, and finally shipments of ore are commencing to come through. The result will be that Gold Crater will immediately assume importance in the mining world. Within the past ten days typical long drawn mule teams have brought thirty tons of ore to the Goldfield mills from the Curtis & Ridge property, and more is still on & Ridge property, and more is still on

NEW FIELD FOR PROSPECTORS.

Opening of Walker Indian Reservation, Nev., Is Coming.

There is every present likelihood that within a few months—perhaps within a few weeks—another mining field will be opened in Nevada that will cause a big rush. The Walker Lake Indian reserva-tion is the place. It lies mostly in the northern end of Esmeralda county (the county that contains Goldfield), but ex-tends a few miles north into Lyon coun-

It is not a large reservation—its length fifty miles and its average width less than fifteen—but it embraces the whole of Walker lake and two ranges of mountains, both known to be well mineralized, the Lake and the Grabb's valley range on the east

on the east.

The railroad from Reno to Tonopah runs down the east shore of the lake which is thirty miles long and from three to fifteen miles in width. Its waters are too alkaline for domestic use, but it supports fish life, and, of course, is very good milling water.

Piped into the desert camps, which can be done it will called the milling prob-

Piped into the desert camps, which can be done, it will solve the milling probem for Tonopah and Goldfield and make these great camps independent of the calinoads and smelters. It would certainly go by gravity from Tonopah to Bullfrog, but, of course, the expense would be heavy—probably \$1,000,000.

But such a sum will be spent rather than leave the vast wealth of low-grade free-milling over amounting to scores of than leave the vast wealth of low-grade free-milling ores, amounting to scores of millions, lving unmined in the Bullfrog district. The greater part of the wealth of all of these new desert camps, as in all camps, no matter how rich some of the product may be, lies in the large bodies of medlum-grade milling ores, and the great need of Tonopah, Goldfield and Bullfrog (not to mention half a dozen minor camps in southwestern Nevada) is cheap and ample water for milling and concentrating their ores.

Both meuntain ranges on the reservation are known to be well mineralized

If plans mature as outlined the identity of several propositions at Bingham may be lost and one big company, strong enough to handle them all, will be in control. The initial move in this direction is that which has been taken during the last few days with respect to the Butler-Liberal. It has been reported that the Indian police and drives them to see that the Indian police and drives them to see that the Indian police and drives them to see that the Indian police and drives them to see that the Indian police and drives them to see that the Indian police and drives them to see that the Indian police and drives them to see that the Indian police and drives them to see that the Indian police and drives them to see that the Indian police and drives them to see that the Indian police and drives them to see that the Indian police and drives them to see that the Indian police and drives them to see that the Indian police and drives them to see that the Indian police and drives them to see that the Indian police and drives them to see that the Indian police and drives them to see that the Indian police and the see that the I off and confiscates whatever tools or

DRY CONCENTRATION.

Efforts of Inventors Promise Much In This Particular Field.

The progress being made in the art of ry concentration is commented upon by the Denver Mining Reporter as follows: "With the extension of the mining in-

give fair promise of success.

"Furthermore, the average dry concentrator or placer machine requires much more delicate adjustment and more careful preparation of the material to be treated than does the wet machine, so that in no sense can it be considered a competitor of the latter. If, however, these devices succeed in any degree in solving the problem which confronts those who would treat the mineral or auriferous deposits in semi-arid regions, they will have been worthy the effort spent in their invention."

REGARDING EAST BUTTE.

Stock Sells for More Than Double Subscription Price.

Subscription Price.

Shares in the East Butte company are reported to be selling on the Boston curb at \$12 to \$12.25, this price being obtained immediately after subscriptions for the original issue were closed. According to advices from the east about \$6,000 shares of this stock were taken in Boston, 70,000 shares were subscribed for in Butte, and a little less than 70,000 shares went to the original owners of the properties. The total stock outstanding is reported as being 200,000 shares.

It was the original intention to begin operations with \$100,000 in the treasury, but this has been changed, and the company starts off with an available cash reserve of \$150,000. This, it is calculated,

reserve of \$150,000. This, it is calculated, will enable the management to sink a shaft 500 feet deep and permit of the

shaft 500 feet deep and permit of the cross-cutting of the many veins in the property as well. One of the East Butte underwriters is quoted as saying:

"The Pennsylvania mine of the Boston & Montana company adjoins the East Butte on the north, and the chances of our finding something value on our side of the line are good. Lessees are now working the property, but of course they can ship only high grade ore, and are leaving much ore of a good second grade which we shall hoist and send to the shall hoist and send to the

LOWER MAMMOTH CHANGE.

Favorable Improvement in Drift for East Fissure Reported.

A letter from Superintendent William Ball of the Lower Mammoth brings the

cheering information that conditions in the cross-cut that is being driven for the east fissure on the 1,500-foot level is show-ing a splendid improvement all the time. In his latest communication, which reached the local offices of the company reached the local offices of the company yesterday morning, he states that another change has taken place and that, while he has not encountered what can be termed ore, the matter is so highly mineralized that it is likely to show commercial values at any moment.

When it is realized that there is still eighty or ninety feet to run according

When it is realized that there is still eighty or ninety feet to run, according to estimate, to reach the fissure, the news that is already beginning to come from the mine indicates that there will be something to talk about inside of the distance mentioned. In the meantime ore is being shipped regularly from the immense bodies of \$15 ore that are blocked out in the west fissure, and the profit from these shipments will more than meet all operating expenses, particularly meet all operating expenses, particularly as the winze below the 1,500 is constantly showing improved values.

Mining Notes. that way just now, all those who acquire property, and most of those who engage in business, will make little or big fortunes.

That's the way they do things in this new country. There are more opportunities in every line of human endeavor than anywhere else in the world. This is especially a good country for young men, but, contrary to the general impression, the qualities which count

Harry B. Cole returned Sunday from a rather extended trip to St. George, where he went with Mrs. Cole, who is spending the winter there. He says the Dixle property of the Utah & Eastern company, which he inspected, looks well, and now that the operating tunnel has been connected with the shaft, he states that the management is getting in shape to make a fine year's record. He did not visit the Paymaster, but he understood that property was giving a good account of itself also. Before coming home, Mr. Cole took a run down into the Crescent district, where he is largely interested Harry B. Cole returned Sunday from a strict, where he is largely interested the Lucky Dutchman and other properties. He brought up some nice samples of ore and gives it as his opinion that he camp will come to the front rapidly
